

Mohamad Dinie Basysar Bin Abdul Manaf
017-2497459 | dbasysar@gmail.com

PROFILE

Bachelor's in Computer Science (Hons) student seeking an internship placement from 7 September 2026 to 11 December 2026. I am specializing in Backend Development and Software Engineering, offering strong proficiency in Object-Oriented Programming (OOP) and Enterprise Programming. With a solid academic background in Database Engineering and Algorithm Analysis, I am capable of designing efficient, secure, and scalable server-side solutions. Fluent in Malay and English with extraordinary interpersonal skills, I am eager to contribute to the development team in the company and gain hands-on experience in a professional enterprise environment.

EDUCATION

Universiti Teknologi MARA | Tapah, Perak **October 2023 - Present**
BACHELOR OF COMPUTER SCIENCE (HONOURS) | CGPA: 3.51

- **Relevance Courses:** Data Structures, Object-Oriented Programming, Enterprise Programming, Software Engineering Principles, Database Engineering, Operating Systems, Algorithm Analysis, Computer Security.
- **Honors:** Four times Dean's List

Kolej Matrikulasi Selangor **July 2022 - July 2023**
Modul 2 | CGPA: 3.85 | MUET: 4.5

- **Relevance Courses:** Computer Science

TECHNICAL SKILLS

Languages : Java, Python, C++
Tools and Frameworks: Visual Studio Code, Pycharm, Google Colab, Firebase, Github

PROJECTS

Mobile Application for Intelligent Grocery Stock Management Using CNN-Based Image Recognition |
Final Year Project

- Developed an Android app that uses a CNN model to automatically identify grocery items via the camera.
- Integrated Firebase for real-time stock updates and cloud data storage to ensure inventory stays synced across devices.
- Designed a dynamic user interface focused on inventory tracking and automated stock alerts.

AdsUrEvent | *Group Project*

- Partnered with a team of 4 to design and develop a fully functional Web Application aimed at enhancing event engagement and streamline manpower management for UiTM Tapah students and organizers.
- Engineered the backend architecture and implemented a real-time database retrieval system using MySQL to ensure seamless data synchronization for live event updates, registrations, and job matchings.
- Developed secure user authentication and role-based access control for two distinct user groups: students (for event discovery and part-time job applications) and organizers (for event promotion and recruitment management).

Hair Baldness Detection | *Group Project*

- Engineered a Deep Learning classification model capable of categorizing hair health into specific diagnostic categories with high precision.
- Implemented a real-time inference engine utilizing a webcam interface for live detection, optimizing for low-latency performance and user accessibility.
- Managed the end-to-end machine learning pipeline, including data preprocessing, feature extraction, and model validation within a collaborative Git-based workflow.

LEADERSHIP EXPERIENCE

BASCO Family Day 2025 | **Jun 2025**

Director

- Direct weekly planning meetings, aligning committee efforts with overarching project goals and maintaining a strict execution timeline.
- Managed resource allocation and stakeholder coordination for a large-scale event, ensuring all logistical milestones were met within budget.

PROGRAM BANTU BACA (PBB) | **October 2022 - November 2022**

Volunteer

- Provided 1-on-1 teaching to a primary school student to help them learn how to read.
- Adapted my teaching style to help the student understand difficult lessons more easily.
- Monitored and tracked the student's progress to ensure they met the program goals.
- Used clear communication to explain concepts, showing patience and the ability to simplify information.
